

Organism Counting

Question: How many apples are there?

Answer: 6

Reasoning:

1. The question asks for the number of apples visible in the provided image.
2. Upon analyzing the image, I observe several apples scattered across the tree branches.
3. Starting from the top left, I identify one apple.
4. Moving slightly downward and to the right, I spot a second apple.
5. Further down and to the right, I locate a third apple.
6. Continuing to scan the image carefully, I find three more apples in different positions among the branches and leaves.
7. Based on this thorough analysis, the total number of apples is 6.

GPT-4.1: ❌

[bert_f1: 0.53]

[rougel_f: 0.52]

1. The question asks for the number of apples visible in the provided image.
2. I carefully examine the image to identify all the apples present.
3. I spot one apple in the upper left corner.
4. I see two apples near the bottom center of the image.
5. I notice another apple to the left of the two apples at the bottom.
6. I find one more apple slightly above and to the right of the bottom apples.
7. Summing these, there are a total of five apples visible in the image. Answer: 5
