

Organism Identification

Question: What are the distinctive features of the plant shown in the image?

Options: A: pine tree with needle-like leaves and brown cones B: cactus with thick, spiny stems and no leaves
C: ostrich fern with arching habit and tough, wiry black rhizomes D: bamboo with straight stalks and green leaves

Answer: C

Reasoning:

1. The question asks to identify the distinctive features of the plant shown in the image and match it with the most appropriate option.
2. The image depicts a plant with arching fronds, characteristic of ferns, and some parts of the plant show wiry, dark structures resembling rhizomes.
3. Option A describes a pine tree with needle-like leaves and brown cones, which does not match the plant in the image as the plant lacks needle-like leaves or cones.
4. Option B describes a cactus with thick, spiny stems and no leaves, which does not match the plant in the image as the plant has leafy fronds and no spiny stems.
5. Option C describes an ostrich fern with an arching habit and tough, wiry black rhizomes, which matches the plant in the image as it has arching fronds and wiry structures.
6. Option D describes bamboo with straight stalks and green leaves, which does not match the plant in the image as the plant lacks straight stalks and bamboo-like features.
7. Based on the analysis, the plant in the image is most consistent with the description in Option C.

GPT-4.1: ✓

[bert_f1: 0.56] [rouge_l_f: 0.58]

1. The question asks for the distinctive features of the plant shown in the image, and provides four options describing different types of plants.
2. Observing the image, the plant has fronds that are divided into leaflets, which is characteristic of ferns. The fronds are arching and some are turning brown, while others are still green and vibrant.
3. Option A describes a pine tree, which has needle-like leaves and cones, not matching the image. Option B describes a cactus, which has thick, spiny stems and no leaves, also not matching. Option D describes bamboo, which has straight stalks and green leaves, not seen in the image. Option C describes an ostrich fern, known for its arching fronds and tough, wiry black rhizomes, which matches the plant in the image.
4. Therefore, the correct answer is C. Answer: C

InternVL3-38B: ✓

[bert_f1: 0.37][rouge_l_f: 0.35]

1. The image shows a cluster of ferns with large, arching fronds.
2. The fronds have a distinct, feathery appearance with a central stem and leaflets arranged on either side.
3. Some fronds are green, while others have a brownish hue, indicating different stages of growth or decay.
4. The description of "ostrich fern with arching habit and tough, wiry black rhizomes" matches the visual characteristics of the ferns in the image.
5. The other options (pine tree, cactus, bamboo) do not match the visual features of the plant shown in the image. Answer: C
