

Pest Recognition

Question: What pest is responsible for the damage shown in this tree bark image?

Options: A: sapsucker

B: carpenter ant

C: wood

D: bark beetle

Answer: A

Reasoning:

1. The question asks to identify the pest responsible for the damage shown in the tree bark image, and the options provided are sapsucker, carpenter ant, wood borer, and bark beetle.
2. The image shows a tree trunk with a distinct pattern of evenly spaced, small holes arranged in horizontal rows.
3. Sapsuckers, a type of woodpecker, are known to create such patterns by pecking holes in tree bark to feed on sap and insects.
4. Carpenter ants typically create irregular tunnels inside wood, which are not visible externally as neat rows of holes.
5. Wood borers and bark beetles also create damage, but their patterns are more random or involve tunneling under the bark, not the uniform rows seen here.
6. Based on the image and the characteristic damage pattern, the pest responsible is a sapsucker.

Final Answer: A

GPT-4.1: ✓

[bert_f1: 0.61][rougel_f: 0.57]

1. The question asks which pest is responsible for the damage shown in the tree bark image, and provides four options: sapsucker, carpenter ant, wood borer, and bark beetle.
2. Observing the image, there are rows of small, evenly spaced holes in the bark, which is a distinctive pattern.
3. Sapsuckers, a type of woodpecker, are known for creating neat rows of holes in tree bark to feed on sap and insects, while carpenter ants, wood borers, and bark beetles typically create more irregular or less visible damage.
4. Therefore, the pattern of damage in the image matches the behavior of sapsuckers. Answer: A

InternVL3-38B: ✓

[bert_f1: 0.22][rougel_f: 0.41]

1. The image shows a tree trunk with rows of small, evenly spaced holes.
2. These holes are characteristic of birds pecking at the bark, specifically the sapsucker, which drills holes to drink the sap.
3. The pattern of the holes is consistent with the feeding behavior of sapsuckers, rather than the random patterns typically made by wood borers or carpenter ants.
4. Bark beetles usually create more scattered and less uniform holes compared to the organized rows seen in the image. Answer: A
