

Spatial Relationship

Question: Based on the provided image, if the abnormal area marked as `standing_water` is taken as the center, what is the spatial relationship between the abnormal area marked as `weed_cluster` and this central area?(The overlap ratio threshold is 50%.)

Options: A: Above B: Below C: Left D: Right E: Upper Left F: Lower Left G: Upper Right H: Lower Right I: Overlap

Answer: C

Reasoning:

1. The question asks to determine the spatial relationship between the abnormal area marked as "`weed_cluster`" and the central area marked as "`standing_water`," with an overlap ratio threshold of 50%.
2. The provided image shows the "`standing_water`" area as a gray region in the lower-right part of the image, while the "`weed_cluster`" appears as sparse light green dots to the left of this gray area.
3. The two areas are spatially separated with minimal overlap (well below the 50% threshold), as the "`weed_cluster`" is distinctly positioned to the left of the "`standing_water`" region.
4. Based on the positional alignment, the spatial relationship is "Left" (meaning the "`weed_cluster`" is located to the left of the central "`standing_water`").
5. Therefore, the correct answer is C: Left.

GPT-4.1:

[bert_f1: 0.46]

[rougel_f: 0.47]

1. The question asks about the spatial relationship between the abnormal area marked as "`weed_cluster`" and the central area marked as "`standing_water`," with an overlap ratio threshold of 50%.
2. I observe the image and see that the "`weed_cluster`" and "`standing_water`" areas are not distinctly separated; instead, they appear to occupy much of the same region, with significant overlap.
3. Given the overlap ratio threshold, if more than 50% of the areas coincide, the correct relationship is "Overlap." Therefore, the answer is I. Answer: I

InternVL3-38B:

[bert_f1: 0.34][rougel_f: 0.41]

1. The image shows a landscape with a body of water on the left side and a patch of vegetation on the right side.
2. The abnormal area marked as `standing_water` is located near the left edge of the image, adjacent to the water.
3. The abnormal area marked as `weed_cluster` is situated to the right of the `standing_water` area.
4. Since the `weed_cluster` is to the right of the `standing_water`, the spatial relationship is that the `weed_cluster` is to the left of the `standing_water` when considering the `standing_water` as the center. Answer: C: Left
